MURMANSK–ANADYR | RELAY CANDIDATES & DISTANCE GAPS

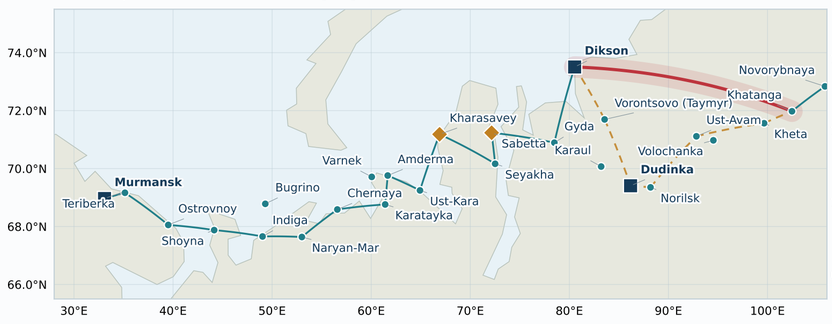

57 candidate sites • 36 illustrative-chain legs • 4 direct gaps over 300 km • 4 November 2026

OVERVIEW — red corridors identify direct legs longer than 300 km

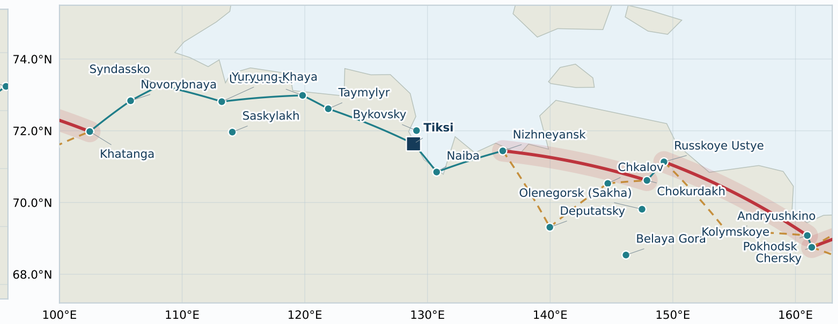

Major/reference port*
Other relay candidate
Industrial site — year-round staffing unverified
Illustrative chain: ≤300 km
Direct gap: >300 km
Candidate detour: each leg ≤300 km

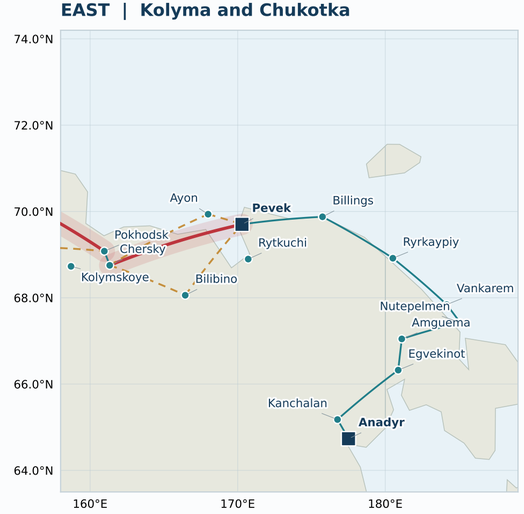

WEST | Kola, Yamal and Taymyr

CENTRAL | Laptev and East Siberian coast

EAST | Kolyma and Chukotka

DIRECT GAPS IN THE ILLUSTRATIVE CHAIN

1. Dikson → Khatanga

741.9 km · intermediate relays required

2. Nizhneyansk → Chokurdakh

435.7 km · intermediate relays required

3. Russkoye Ustye → Pokhodsk

498.4 km · intermediate relays required

4. Chersky → Pevek

370.0 km · intermediate relays required

Red shading marks long direct links; it is not an offshore coverage boundary. Inland detours are candidates, not confirmed operating routes.

All 57 sites require site-level qualification. Electricity, permanent presence, access and aircraft range are not fully verified. Gyda–Dikson: 299.8 km (borderline).

*Port symbols follow port labels in Arc_map_full.png; they do not assert a verified ranking by cargo volume. Sabetta is shown as a conditional industrial site.

Sources: relay-locations.csv; relay-chain-distances.csv; Arc_map_full.png (reference). Coastline: Natural Earth 1:110m land, public domain.

Coordinates: WGS84. Display: equidistant cylindrical, standard parallel 70°N; links drawn as great circles. Reported distances: existing WGS84 ellipsoidal calculations.
